CHEAT SHEET UTS · WEEKS 1–7

MK 1 · Organizational Behavior & Managing People

Don't mix these up

- Purpose = why; values = how; self-awareness = who.
- DISC: D results, I people, S stability, C rules & accuracy. Mask = public, Core = natural/under pressure, Mirror = self-image.
- Herzberg: hygiene (pay, conditions) only prevents dissatisfaction; motivators (achievement, recognition) create satisfaction.
- MARS = Motivation, Ability, Role perception, Situational factors. AMO = Ability, Motivation, Opportunity.
- Tuckman: forming → storming → norming → performing → adjourning. High cohesion + low norms = danger.
- French & Raven: legitimate, reward, coercive (position) vs expert, referent (personal, lasts longer) + informational.

W1 Strategizing Your Life — Living by Design

The paradox: we plan everything except our own lives · Pillar 1 — Purpose (Why): your North Star · Pillar 2 — Values (How): your decision filter · Pillar 3 — Self-Awareness (Who): two mirrors · Putting it together: a 4-step blueprint · The two mirrors in one picture: the Johari Window · Life audit: does your time match your values?

- Most people live by default; a life strategy means living by design.
- Three pillars: Purpose (why), Values (how), Self-Awareness (who).
- Ikigai = overlap of what you love, are good at, the world needs, and can be paid for.
- Purpose formula: "I exist to [action] so that [impact]."
- Misalignment between values and actions = inner friction.
- Self-awareness has internal and external mirrors; growth = closing the gap.
- Ask "who do I want to become", not just "what do I want to achieve".

FORMULAS

```
Purpose + Values + Self-Awareness = a life
on your own terms
```

W2 Who Am I at Work? — Identity, Personality & Individual Differences

Big picture: from self-awareness to mutual awareness · Why focus on behavior rather than personality? · The DISC model: origins and logic · The four DISC types in detail · The three DISC graphs: mask, core, mirror · How to deal with each type · The DISC map: two simple questions · Under stress: how behaviour shifts and how to adapt

- Flow: self-awareness → mutual awareness → team trust.
- Focus on behavior because it's observable and changeable.
- DISC = environment (favorable/unfavorable) × response (active/passive).
- D = results; I = people & persuasion; S = stability & pace; C = rules & accuracy.
- Three graphs: Mask (public), Core (natural/under pressure), Mirror (self-perception).
- Adapt communication to the other person's style.
- Effective teams = complementary types in fitting roles.

W3 Motivation at Work — Getting the Best Out of People

What is motivation? · Motivation and performance: Performance = Ability × Motivation · Four Drives theory (Nohria, Groysberg & Lee, 2008) · Classic theories: Maslow, McClelland, Herzberg · Does money really motivate? Intrinsic vs extrinsic · Try it: why motivation works as a multiplier · Motivation theories on one map

- Motivation = direction, intensity, persistence of effort; it's a choice.
- Performance = Ability × Motivation; AMO adds Opportunity, MARS adds Role perceptions & Situation.
- Four Drives: acquire, bond, comprehend, defend — meet all four.
- The direct manager strongly shapes team motivation.
- Herzberg: hygiene prevents dissatisfaction; motivators create satisfaction.
- Money works for simple/quantity tasks; intrinsic motivation for complex/quality tasks.
- Beware "rewarding A while hoping for B".

FORMULAS

```
Performance = f (Ability × Motivation)
```

W4 Leadership — Art or Science?

Eight HBR views on leadership · Six traits of excellent leaders (CEO Excellence, McKinsey) — "Be Bold" · Leadership styles: from traits to situational · Transactional vs transformational — and the Nadella lesson

- Leadership is both art and science.
- Eight HBR views: EQ, effectiveness, adaptive, inspiring, humility+will, crucibles, authentic, incomplete.
- Six CEO Excellence traits: purpose-driven, giver, mobilizer, orchestrator, grit, learner.
- Culture changes through systems (rewards, reviews), not slogans.
- Growth mindset: from know-it-all to learn-it-all.
- Leaders model behavior most when they're wrong.
- Middle managers are often the key — or the blocker — in transformation.

W5 Team Dynamics — Communication, Ego States & High-Performing Teams

Team condition matrix: cohesiveness × performance norm · Building a high-performing team · Communication: active listening and the power of words · Transactional Analysis: Parent – Adult – Child ego states (Eric Berne) · Team development stages (Tuckman): why new teams dip first · Reading transactions: when communication flows and when it jams

- High cohesion + low norm = danger; raise the norm first.
- Tuckman: forming → storming → norming → performing → adjourning.
- Five habits: direct communication, meaningful meetings, relationships, appreciation, psychological safety.
- Best teams report more errors because they feel safe.
- Active listening: confirm, clarify, pause — don't judge or advise.
- Use concrete, emotional, audience-matched language; criticize with SBI.
- P-A-C ego states; parallel, crossed, ulterior transactions; shift to Adult to resolve conflict.

W6 Organizational Dynamics in the Indonesian Context — SOEs vs Private

Warm-up: what does this data say? · Organizational capability: 9 dimensions (SBM-ITB model) · The LCOP model: how it connects · Which dimensions matter most? · Visualised: same industry, very different performance · The LCOP model drawn: SOE vs private · Exercise: reading a company's capability radar

- Same industry, different results → internal dynamics, not just assets.
- Organizational capability: 9 dimensions; Seeks Change and Speed load highest.
- LCOP: Leadership → Culture → Capability → Performance; Politics erodes performance.
- Leadership and culture affect performance only via capability (mediation).
- Organizational politics is higher and more harmful in SOEs.
- In SOEs: strategic/transformational leadership, adaptive & involving culture, curb resistance and self-serving bias.

W7 Power & Politics in Organizations

Why power matters; functions of hierarchy · Sources of power · How power changes thinking and behavior · Formal vs informal hierarchy; status behavior · Hierarchy checks and balances; defining organizational politics · Five bases of power (French & Raven) and their effects · Mapping politics: the power × interest stakeholder grid

- Power = ability to influence; using it well is a managerial skill.
- Power (resource control, can coerce) ≠ status (respect, voluntary).
- French & Raven: legitimate, referent, expert, reward, coercive, informational.
- Personal power outlasts positional power.
- Managers who feel powerless become authoritarian and hold back talent.
- People fear losing status more than they want to gain it.
- Politics arises over scarce resources; distinguish constructive from destructive politics.
