SUMMARY · MK 3 MARKETING MANAGEMENT · WEEK 6

STP Strategy: Segmentation, Targeting & Positioning

The core of customer-driven strategy: dividing the market (segmentation), choosing whom to serve (targeting), and owning a clear place in customers' minds (differentiation & positioning). Case: HubSpot — from "Owner Ollie vs Marketer Mary" in the US (2009) to positioning HubSpot for Indonesian B2B buyers in 2026–2029.

Material

1 Segmentation: bases for dividing markets

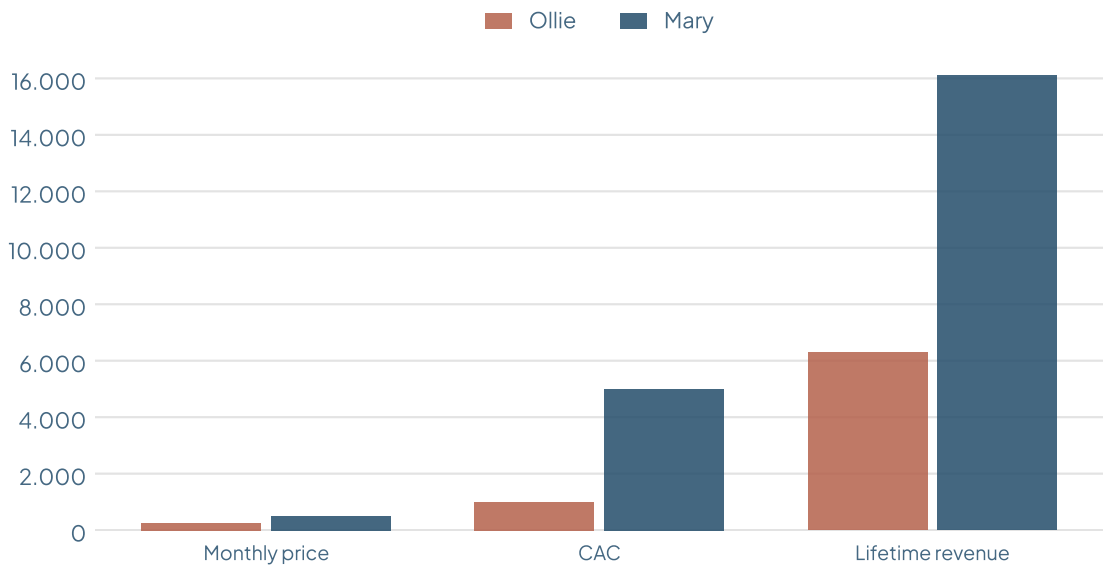

Segmentation splits heterogeneous markets into groups with similar needs and responses. Bases: geographic, demographic, psychographic, behavioral (occasion, benefit, user status, usage rate, loyalty), hybrid. B2B adds operating characteristics, purchasing approach, situational and personal factors; international adds economic, political/legal and cultural factors. Effective segments are **MASAD**: Measurable, Accessible, Substantial, Actionable, Differentiable.

2 Targeting: choosing whom to serve

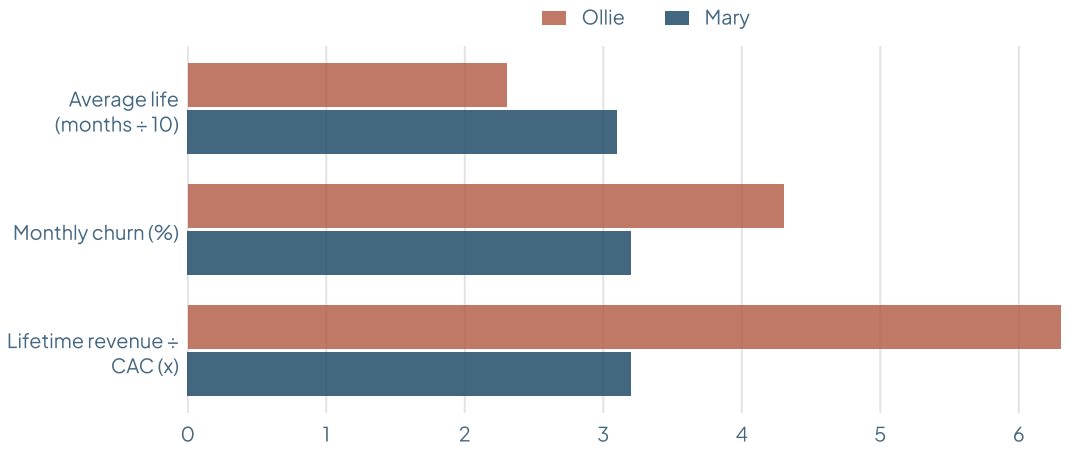

Evaluate segment size & growth, structural attractiveness and company objectives/resources (10 criteria incl. margin, competitors, channels, capability, brand strategy). Targeting strategies: undifferentiated, differentiated (e.g. Toyota's line-up), concentrated/niche, micromarketing (local or individual). Choice depends on resources, product and market variability, life-cycle stage and competitors.

3 Ollie vs Mary: valuing segments with numbers Deep dive

HubSpot: Owner Ollie vs Marketer Mary (US$)

Customer lifetime and value/CAC ratio

Row 1 ÷ 10: ~23 vs ~31 months.

Mary pays more and stays longer but costs five times as much to acquire; Ollie's lifetime/CAC ratio is higher (6.3× vs 3.2×).

Sticky features cut churn

CMS hosting: 2.1% vs 5.5% monthly churn.

4 Differentiation & positioning

Positioning is perception — relative and dynamic. Steps: (1) read the perceptual map; (2) choose an advantage (product, service, channel, people, image) that is important, distinctive, superior, communicable, preemptive, affordable, profitable; (3) value proposition (more for more … more for less); (4) positioning statement. **PoD** = strong, favourable, unique associations; **PoP** = category or competitive parity. `For (target & need), (brand) is (concept) that (point of difference).` Three-circle analysis finds PoDs.

5 Perceptual maps for positioning Deep dive

Example detergent perceptual map (illustrative)

Illustrative positions; the green point is the 'high quality, mid price' gap.

Value proposition
More for more
More for the same
Same for less

Less for much less
More for less

```
To [target] who [need], [brand] is the [category] that
[difference] because [reason to believe].
```

Key takeaways

1. STP: segmentation → targeting → differentiation & positioning.
2. Bases: geographic, demographic, psychographic, behavioral, hybrid.
3. Effective segments are MASAD.
4. Targeting: undifferentiated, differentiated, concentrated, micromarketing.
5. Positioning is relative perception; use perceptual maps.
6. Promote advantages that are important, distinctive, superior, communicable, preemptive, affordable, profitable.
7. PoD vs PoP; statement: For… (brand) is… that…

Case studies

Case & worked answers

HubSpot: Inbound Marketing (HBS) + HubSpot in Indonesia (2026)

HBS 2009: Owner Ollie (73%, $250/mo, CAC ~$1,000, churn 4.3%/mo → ~23 months, ~$6,300 lifetime revenue, ~6.3× CAC) vs Marketer Mary (27%, $500/mo, CAC ~$5,000, churn 3.2% → ~31 months, ~$16,100, ~3.2×). Revenue-based, indicative only. CMS hosting cut churn (2.1% vs 5.5%).

Indonesia 2026: chat-first buyers; a "foreignness tax" (USD pricing, 11–12% VAT, offshore data, English UI, WhatsApp only in Professional tiers). Ten Professional seats ≈ $12,300 ≈ IDR 244.6m incl. VAT. Rivals: Salesforce (enterprise, local data), Zoho, Mekari Qontak (WhatsApp-native, rupiah, local), Barantum, inbox tools, and "no CRM".

STP: MASAD favours digitally mature mid-market firms and exporters; chat-heavy SMEs fail actionability; regulated sectors favour Salesforce. Target A and C. Position as the easiest integrated CRM with global standards, turning foreignness into a signal; reach competitive parity on WhatsApp and Bahasa support via partners; differentiate on integration, ease vs Salesforce and the global ecosystem; scale the partner network.

Worked examples

Problem 1 · Medium · **Customer lifetime value**

Margin per pelanggan per tahun Rp1 juta, retensi 80%, diskonto 10%. Hitung CLV 3 tahun. Jika biaya akuisisi (CAC) Rp1,2 juta, apakah layak?

1. $CLV = \Sigma\ m \times r^t \div (1 + d)^t$
2. Tahun 1: 1 × 0,8 ÷ 1,1 = 0,727.
3. Tahun 2: 1 × 0,64 ÷ 1,21 = 0,529.
4. Tahun 3: 1 × 0,512 ÷ 1,331 = 0,385.
5. CLV 3 tahun = 0,727 + 0,529 + 0,385 = 1,641 juta > CAC 1,2 juta → layak.

Answer: CLV 3 tahun ± Rp1,64 juta; lebih besar dari CAC Rp1,2 juta, jadi akuisisi menguntungkan.

Practice questions

Try answering first. The answer key is below each question.

1. 4.3% monthly churn implies an average life of about…

A. 4
B. 12
C. 23
D. 43 months

Answer: C. 1/0.043.

---

2. A good target segment must be, among others…

A. As big as possible
B. Measurable, substantial, accessible, differentiable, actionable
C. Always upscale
D. Same as rivals

Answer: B. Effective segmentation criteria.

---

3. Daia: similar quality, lower price. This is…

A. More for more
B. Same for less
C. Less for much less
D. More for same

Answer: B. Same for less.

---

4. Why isn't Mary automatically the best segment at $500/month?

A. Higher churn
B. CAC $5,000 gives only 3.2×
C. Doesn't use the product
D. Small owner

Answer: B. Compare CLV with CAC.

---

5. CMS hosting cuts churn from 5.5% to 2.1% monthly. Effect on CLV…

A. None
B. Lower
C. Sharply higher via longer life
D. Only CAC

Answer: C. ~18 → ~48 months.
